Engineering Document Management Solution

Improve document control, transparency, compliance and project completion speeds on multi-party engineering projects

Major engineering projects carry inherent risk. But with millions of dollars at stake, inefficient systems and processes are placing even more pressure on those involved – heightening the probability of unforeseen complications and costly mistakes.
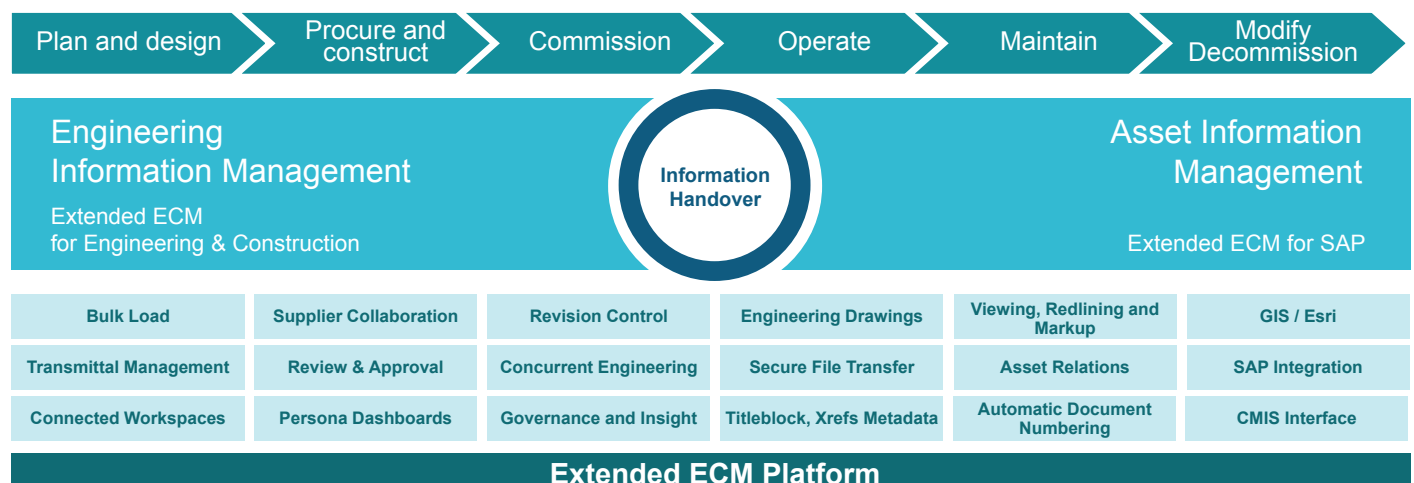

Safety and compliance are exposed by processes lacking in consistency and control, putting companies at risk of failing to execute projects and deliver on their contractual obligations. Payout events, such as completion milestones and handovers, are difficult to achieve without secure tracking of what has been achieved. And with multiple stakeholders, complex information flows, and huge numbers of documents to process, manual efforts are simply no longer up to the job.

Only a single authoritative engineering solution specifically designed to store and control engineering documents, processes, and provide a single point of truth can tackle these challenges.

TerraLink's engineering document management solution, which is based on the OpenText Extended ECM for Engineering platform, provides an accessible source of information for control managers, engineers, engineering leaders, and external collaborators. By controlling engineering information and work processes it helps to minimize risk and accelerate revenue across even the most complex projects.

TerraLink customer results

- Approval cycles completed three times quicker due to targeted progress notifications
- Large files transferred 20 times quicker than FTP
- Zero lost documents thanks to automatic handling of all transmittals
- Software license expenditure cut by 80% with BRAVA technology for web-based CAD file viewing and commenting

Plan and design	Procure and construct	Commission	Operate	Maintain	Modify Decommission

Engineering Information Management	Information Handover	Asset Information Management
Extended ECM for Engineering & Construction		Extended ECM for SAP

Bulk Load	Supplier Collaboration	Revision Control	Engineering Drawings	Viewing, Redlining and Markup	GIS / Esri
Transmittal Management	Review & Approval	Concurrent Engineering	Secure File Transfer	Asset Relations	SAP Integration
Connected Workspaces	Persona Dashboards	Governance and Insight	Titleblock, Xrefs Metadata	Automatic Document Numbering	CMIS Interface

Extended ECM Platform

Extended ECM across the asset lifecycle

A TerraLink engineering document management installation helps you to avoid common pitfalls for major projects, such as senior workers holding expert knowledge that is not passed throughout the team and a lack of control leading to scheduling, cost and non-compliance risks.
Selected solution highlights

- Improve the ROI and pace of projects through accelerated exchange and collaboration.
- Accelerate project setup via best practice configuration templates.
- Enjoy secure access and collaboration on engineering documents from anywhere in the world.
- Benefit from a more efficient way of finding information, completing work and controlling risk through persona-driven dashboards and streamlined processes.
- Harness the ability to integrate varied sources of engineering information, including Dassault® SOLIDWORKS®, Bentley® MicroStation®, AutoDesk® AutoCAD® and Revit® 3D.

How can TerraLink help your business?

- Accelerate production revenue with SAP for Plant Maintenance integration.
- Increase staff productivity by making it easier for your teams to find engineering information, complete work processes, and control risk.
- Enhance collaboration ability by delivering an easy platform on which to share large volumes of content with both internal and external parties.
- Strengthen your ability to defend against litigation by providing detailed audit trails that track who did what and when.
- Encourage operational excellence by providing customizable best practices and standardized approaches.
- Reduce costs by shortening the time to project completion while simultaneously reducing execution risk.

When you work with TerraLink, you enjoy the support of an experienced team with an international perspective. We've completed more than 150 major ECM projects in seven countries across three continents. We are capable of quickly determining the optimal solution to fit your circumstances and have both cloud and on-premise implementations in our portfolio
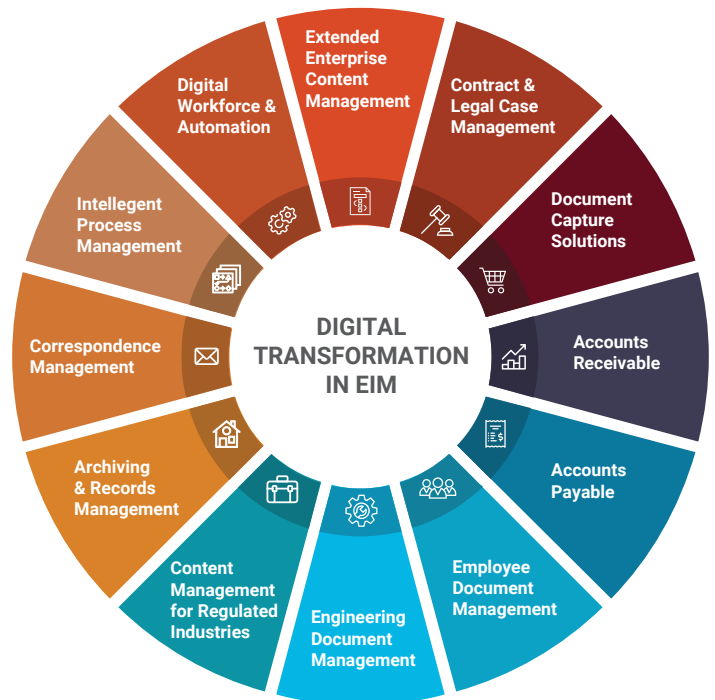

Experts trusted around the world

- More than 200,000 global users benefit from TerraLink ECM solutions
- A team of 200+ skilled professionals are ready to implement your solution
- The average TerraLink team member has 11.4 years' experience
- TerraLink has been an OpenText Platinum partner since 2009
- Guaranteed stability, scalability and innovation

Our solutions

DIGITAL TRANSFORMATION IN EIM

- Extended Enterprise Content Management
- Contract & Legal Case Management
- Document Capture Solutions
- Accounts Receivable
- Accounts Payable
- Employee Document Management
- Engineering Document Management
- Content Management for Regulated Industries
- Archiving & Records Management
- Correspondence Management
- Intelligent Process Management
- Digital Workforce & Automation
